Additive for cement concrete

Introduction

Additive for cement concrete is one of high performance product made from our company, it has kinds of type, such as water reducing type, slump retention type, ect.

Product Features:

- 1, outstanding comprehensive performance: Additive for cement concrete has a high water reduction rate (water reduction rate can reach more than 35%) and a low time-lapse collapse loss rate, improve the working performance of concrete, improve the strength and durability of concrete.
2. Good working performance of concrete: good workability of fresh concrete, no segregation, no bleeding, good cohesion, moderate air content, suitable for pumping;
3. High hardening and durability of concrete: high strength at all ages, good stability, outstanding impermeability, freeze-thaw resistance, corrosion resistance and carbonation resistance;
- 4, wide adaptability: Portland cement, Portland slag, fly ash cement, pozzolan cement and a variety of admixtures have a wide range of

adaptability.

Green, environmental protection: Additive for cement concrete are non-toxic, harmless, no pollution of the environment in the production process, no waste water discharge.

Usage:

1. According to the use of materials and construction requirements, the best mixing amount shall be determined by test;
2. Additive for cement concrete can be dissolved in water or added to concrete mixer separately;
3. The product can be used in combination with various retarders;

Applicable Scope:

- 1, suitable for the preparation of early strength concrete, retarded concrete, precast concrete, self-compacting concrete, mass concrete, high-performance concrete, all kinds of industrial and civil buildings.
2. It can be widely used in high-speed railways, water conservancy and hydropower projects, subways, large Bridges, expressways, and other national large and key projects;
- 3, applicable to all kinds of industrial and civil construction and commercial concrete mixing station.
